

Instructions

Using a dataset of your choice, train a decision tree model, a random forest model, and a feed-forward neural network.

- ❖ Interpret the models' decisions using SHAP.
- ❖ Interpret the models' decisions using LIME.
- ❖ In your own words, compare the explanations of the three models for both approaches.

Please note that you are expected to follow the Machine Learning workflow and utilize all that you have learned in class during the implementation of this project.

Submission guidelines

Email: muyamalillian@gmail.com

Deadline: 04th May, 2026 at 6:00 pm

File format: Jupyter notebooks only. No .py files allowed. The notebook should be already compiled so that I can see the output, without running it myself.

Include the details of all group members as comments in the first cell of the notebook.
